

Policy: Immunization Policy

We firmly believe in the effectiveness of vaccines to prevent serious illness and to save lives.

We firmly believe in the safety of our vaccines.

We firmly believe that all children and young adults should receive all of the recommended vaccines according to the schedule published by the Centers for Disease Control and Prevention and the American Academy of Pediatrics.

We firmly believe, based on all available literature, evidence, and current studies, that vaccines do not cause autism or other developmental disabilities. We firmly believe that thimerosal, a preservative that has been in vaccines for decades and remains in some vaccines, does not cause autism or other developmental disabilities.

We firmly believe that vaccinating children and young adults may be the single most important health-promoting intervention we perform as healthcare providers, and that you can perform as parents/caregivers. The recommended vaccines and the vaccine schedule are the results of years and years of scientific study and data gathering on millions of children by thousands of our brightest scientists and physicians.

When you don't vaccinate, you take a significant risk with your child's health and the health of others around them. We recognize that the choice may be a very emotional one for some parents. We will do everything we can to convince you that vaccinating according to the schedule is the right thing to do.

Because we are committed to protecting the health of your children through vaccination, we require all of our patients to be vaccinated. Infants will receive all age-appropriate recommended vaccines by three months of age, with additional recommended vaccines as well as booster doses by two years of age. Children will receive additional recommended booster doses by the time they are seven years old, and will be given recommended 11–12-year preteen vaccinations by the time they are 13 years old. We will complete 16-year

teen vaccinations before each child's 17th birthday. And, we will also give your child/teen an annual influenza vaccination unless they receive it at a school clinic or pharmacy.

Finally, if you should absolutely refuse to vaccinate your child despite all our efforts, we will ask you to find another healthcare provider who shares your views. We do not keep a list of such providers, nor would we recommend any such physician. Please recognize that by not vaccinating, you are putting your child at unnecessary risk for life-threatening illness and disability, and even death. As medical professionals, we feel very strongly that vaccinating your child on schedule with currently available vaccines is absolutely the right thing to do to protect all children and young adults. Thank you for taking the time to read this policy. Please feel free to discuss any questions or concerns you may have about vaccines with any one of our health care providers.
